PROJECT NEVERMORE

MASTER PRODUCTION BIBLE // CANON CODEX

SYSTEM STATUS: CEMENTED // PRODUCTION MATRIX ACTIVE
AUTHOR: CREATIVE OPERATIONS AGENT DIRECTORY
COMPUTE RESOURCE: TUNED AMD 6800U NODE
SPECIFICATION: CAI METADATA ARCHITECTURE V1.3
DATE: JUNE 18, 2026 // VERSION 1.0

> **CREATIVE DIRECTIVE:** This document serves as the absolute production canonical bible for *PROJECT_NEVERMORE*. All generative inference loops, text models, visual diffusion passes, and spatial sound mixes must conform to the strict physical, stylistic, and cryptographic constraints established herein. Any output violating these specs is non-canonical.

1. CREATIVE ESSENCE & CHROMATIC TAXONOMY

PROJECT_NEVERMORE is built on the narrative and visual synthesis of **Surreal Futurism**. Traditional digital media interfaces fail because they operate on unconstrained, statistical improvisations. Here, we enforce systematic structure. Our environments represent physical-stylistic simulators where the dreamlike, subconscious logic of Salvador Dalí and René Magritte collides with the heavy industrial and aerodynamic engineering curves of Syd Mead and Arthur Radebaugh.

Light in our universe behaves analytically, generating intense prism refractions and rainbow spectral edge separations (chromatic aberrations) through translucent bulkheads and faceted glass viewports.

1.1 The 60-30-10 Chromatic Architecture

Color is utilized as a primary cognitive tool to manage spatial depth, direct attention, and elicit emotional responses. Visual frames strictly partition their surface areas into three color channels:

• **60% Dominant Color (Base Canvas):** Slate-Purples, Deep Slates, and Clinical Icy Whites. These color boundaries compose the structural architecture, background hulls, and casting shadow volumes, ensuring solid value contrast.

• **30% Secondary Color (Dynamic Conduit):** Golden-Orange sunset rays and Ochre elements that cut diagonally across panels to convey classical perspective and spatial volume.

• **10% Accent Color (Disruptive Pop):** High-intensity Electric Cyan, Teal, and Coral Red. These are reserved exclusively for character highlights, terminal indicators, active power grids, and interactive holographic interface elements.

1.2 Calibrated Chromatic Reference Palettes

Palette Name	60% Base (Hex)	30% Secondary (Hex)	10% Accent (Hex)	Narrative Role
NeverRender Labs	Slate-Teal (#124559)	Electric Cyan (#00E5FF)	Coral Red (#FF6B6B)	Industrial Sci-Fi settings and reactor cores
Moebius Twilight	Slate-Purple (#1E1B4B)	Sunset Gold (#F59E0B)	Neon-Teal (#06B6D4)	Exterior panoramas, cityscapes, starports
Syd Mead Aero	Metallic Grey (#64748B)	Warm Ochre (#B45309)	Prism Cyan (#38BDF8)	Aerodynamic vehicle chassis and panel joints
Deep Void Slate	Slate Blue (#0F172A)	Cool Grey (#475569)	Vivid Jade (#14B8A6)	Dense shadow volumes, atmospheric gaps
Active Indicator	Clinical White (#F8FAFC)	Slate Grey (#334155)	Active Coral (#EF4444)	Interactive console buttons, pilot suits

2. CHARACTER DNA SPECIFICATION: @VESPERA

To prevent generative engines from introducing accidental mutations, Vespera's identity must be established via written constraints. Under long-horizon text generation, flat vectors or W++ formatting waste context budget and cause memory decay. We enforce a structured YAML/JSON attribute setup to lock her voice and behavior patterns.

2.1 Explicit Written DNA (Identity Law)

> **DNA Word String:** *'An athletic female star-pilot with a sharp jawline and a short asymmetrical neon-teal bob haircut wearing a pristine white retro-futuristic flight suit with orange brass piping and a high collar.'*
> **Positive Constraints:** Hair must remain asymmetrical; suit piping must remain orange; eyes are lavender; left chest bears a terminal focus coral indicator badge.

2.2 NovelAI Lorebook / PList Attribute Spec

```
Vespera:
  Type: Character (Human, Female, Pilot)
  Vibe: Intense calm, quiet melancholy, existential nostalgia
  Keys: [Vespera, @Vespera, chrono-pilot, star-pilot]
  Insertion:
    Order: 5 (Priority injection over draft history)
    Position: -1 (Count back from context bottom)
    Tokens: 250 (Reserved boundary context block)
  Mannerisms:
    - Adjusts high collar when tense or during temporal shifts
    - Traces gloved thumb over rotating compass micro-gears
    - Maintains lavender-eyed gaze contact during dialogue
  Speech:
    - Breathy, low-volume, highly measured paralinguistic tone
    - Subtle upward pitch inflection at the end of key phrases
    - Complete omission of informal slang; uses precise technical terminology
```

2.3 Dialog Formatting & Token-Association (Rails)

Dialogue scenes must wrap actions in asterisks and prefix exchanges with clean identifiers. This forces the model to associate physical behavior with the active character token, preventing voice drift:

```
<START>
The warning console pulsed in off-screen cyan. *Vespera adjusted her high collar* with a
steady hand, her lavender eyes tracing the timeline fluctuation. "The chronological
alignment has broken by seven degrees. We do not have another minute to wait."
```

3. EPISODIC STORYBOARD & TEMPORAL AUDIO-VISUAL SCRIPT

To ensure seamless continuity, scene creation operates under the **MTV (Multi-stream Temporal Control)** paradigm. Video and audio are demixed into independent, synchronized streams: Speech (lip-sync), Event Timing (tactile sound triggers), and Visual Mood (overall musical envelope).

3.1 Scene 1 Storyboard Timeline: 'The Awakening'

Shot ID	Framing	Duration	Visual Composition	Kinetic Motion Prompts	Status
S01	Wide View	6.0s	Vespera looking out massive viewport at sunset city.	Slow dolly forward tracking shot.	Complete
S02	Medium Close	4.0s	Vespera turning head, reacting in surprise curiosity.	Pan left, lock focus on character gaze.	Complete
S03	ECU Insert	5.0s	Close-up on brass chrono-compass as micro-gears spin.	Static macro lens, rotating depth-of-field.	Complete
S04	Wide Shot	6.0s	Vespera walking toward active glowing generator dock.	Low-angle crane shot sweeping upward.	Scheduled
S05	Medium Shot	4.0s	Hands adjusting controls, active indicator lighting.	Dolly pan tracking gloved fingers.	Scheduled
S06	Cutaway	5.0s	Exterior observation pod doors sliding open.	Fast zoom out, establishing scale of hangar.	Scheduled

3.2 Object-Based Spatial Audio Metadata & User Preferences

Audio cues are rendered as discrete, diegetic objects embedded with precise 3D trajectory metadata (ADM profiles) rather than standard channel feeds. To ensure optimal immersion, sound mixes must target loudspeaker arrays:

> **Auditory Immersion Metric:** Systematic A/B preference testing indicates that **66.7% of surveyed participants** actively prefer a Multichannel Loudspeaker Array over binaural headphone configurations for spatial VR/XR immersion (95% CI: [54.1%, 87.7%]). Our pipeline mandates multi-channel mixes.
> **Cockpit Reactor Hum Cue:** Cartesian coordinates (0.0, -5.0, -2.0) at 45Hz.
> **Console Alert Cue (Gaze Steering):** Spherical coordinates (r=3.5m, theta=45 degrees, phi=10 degrees). This off-screen cue acts as an attentional pointer, guiding the viewer's gaze back to the active viewport.

4. NEURAL PIPELINE & IDENTITY PRESERVATION

Maintaining character consistency across stochastic diffusion models requires separating identity encoding from kinetic motion generation. Pre-production assets are processed using tuning-free adapters, spatial-temporal guidance, and precise negative boundaries.

4.1 Spatial, Temporal & Geometric Identity Adapters

Pipeline Layer	Primary Control Adapter	Key Calibration Settings	Architectural Advantage
Spatial Face	PuLID (Pure & Lightning ID)	Eva-CLIP encoder; Lightning T2I; Weight: 0.6	Prevents style bleed; keeps environmental lights from coloring hair/skin.
Spatial Structure	InstantID (IdentityNet)	RetinaFace landmark keypoints; Strength: 0.8	Rigid facial bone-structure anchoring with high text-editability.
Region Control	Character-Adapter	Prompt-guided segmentation; Dynamic regions	Isolates clothes/props to prevent attribute bleed into background.
Temporal Video	FLATTEN (Flow-guided Attention)	Optical flow-guided UNet attention	Locks background details; prevents sliding and pixel-morphing.
Commercial	Midjourney (V7 / V8.1)	--cref [image URL] combined with --cw 0	Locks face structure while allowing clothing and hair variations.

4.2 Production Directives & Motion Prompts

Rule 1 (The Anchor-to-Video Rule): Never generate motion from pure text. Video models must be initialized with a high-resolution starting keyframe from the Character Pack. This is known as the Image-to-Video Anchor method.

Rule 2 (The Motion Separation Prompt): Positive prompts in the video generator must describe ONLY camera movement and physical transitions (e.g., *'slow zoom in, character turns head'*). **Do not re-describe Vespera's physical features or suit**. This prevents the scheduler from overwriting the bound reference tokens and hallucinating a mutated face.

4.3 Copy-Pasteable Negative Guardrail Layers

To restrict the scheduler from deviating from the base reference, apply this negative prompt layer across every generation run:

```
"facial morphing, changing clothes, shifting suit colors, jawline warping, de-aging,
extra limbs, flickering background, hair color mutation, changing haircut symmetry,
glasses, sunglasses, background crawling, pixel sliding, digital noise"
```

5. DIGITAL PROVENANCE, METADATA & C2PA COMPLIANCE

As an enterprise-grade creative franchise, PROJECT_NEVERMORE enforces strict copyright sourcing and authenticity standards. By cryptographically documenting our human-in-the-loop review process, we protect our intellectual property and secure copyright claims over our final compiled worlds.

5.1 C2PA Manifest Architecture (v1.3 Content Credentials)

Every asset exported from the pipeline must contain a cryptographically signed, tamper-evident manifest store. This store lists every asset's ingredient lineage (images, scripts, prompt files) and records where human design ended and generative AI inference began.

• **Mandatory Actions Assertion:** Every manifest must contain a c2pa.actions block detailing a c2pa.created action.

• **Digital Source Type:** The digitalSourceType field must be set strictly to http://cv.iptc.org/newscodes/digitalsourcetype/trainedAlgorithmicMedia.

• **Ingredient Assertions:** Inputs like text prompts, reference images, and generation seed numbers are recorded as inputTo ingredients to preserve parent-child tracking.

• **Soft Bindings & Manifest Repositories:** If C2PA manifests are stripped during social distribution, an invisible perceptual watermark remains embedded. This soft binding connects back to news-consortium manifest repositories to restore the asset's provenance.

5.2 Enterprise Production Compliance Checklist

Compliance Category	Required Metric / Action	Verification Method
IP Sourcing	Refuse models trained on uncurated, pirated, or scraped datasets.	Verify developer licensing agreements before model ingestion.
Human Control	Maintain comprehensive system development logs showing human review/edit.	Document artist paint-overs, 3D retopology steps, and timeline edits.
C2PA Metadata	Solder a signed manifest to every published image, video, and PDF.	Validate final assets using Verify.contentauthenticity.org portal.
Watermarking	Apply a soft-binding perceptual watermark directly into pixel bytes.	Verify watermark detection after lossy H.264 compression loops.
Operational Safety	Refuse prompt parameters or outputs depicting unsafe or illegal acts.	Deploy an automated guardrail audit node over generation API gates.

> **DIRECTOR'S CEMENTATION BLOCK:**
> By decree of the Creative Director, the architectural standards, chromatic taxonomic structures, character specifications, and compliance rules in this Production Bible are locked.
