Hi Manny,

I engineered a working retail pilot specifically for the Wellgreens Vista store designed to solve two persistent operational headaches: delivery intake lag in the backroom and touch-screen friction on the sales floor.

The build bridges incoming inventory directly to customer checkout through two linked, zero-install web tools you can test directly on your phone:

1. Back-of-House: The Mobile Intake Scanner & Compliance Engine

- **Live Tool:** renderwithoutcode.com/wellgreens-scanner.html
- **What it does:** Uses on-device computer vision and OCR right in the browser (cross-compatible across Android phones, iPhones, and store iPads). intake staff point a camera at delivery packaging or compliance stickers to automatically pull 24-character California METRC tags, retail pricing, and batch potencies in seconds.
- **Workflow Impact:** Staff receive immediate POS audio confirmation beeps and push items straight into a live inventory JSON table with one tap—eliminating manual typing and spreadsheet bottlenecks.

2. Front-of-House: Redesigned Vista Kiosk & "Kiosk-to-Pocket" Handoff

- **Live Storefront:** renderwithoutcode.com/wellgreens-vista/
- **What it does:** A high-speed, modern digital menu and lobby kiosk interface that consumes the intake scanner's live inventory feed in real time.
- **The Scan-to-Cart Bridge:** Instead of forcing customers to type personal phone numbers, passwords, or payment info onto a shared public touchscreen, each product card generates a dynamic QR code. Customers simply scan the screen with their personal smartphone camera to drop that exact, verified batch directly into their Wellgreens mobile cart for express pickup.

The Design Partner Pilot

We are rolling this pipeline out as an early operational pilot with select North County operators. Rather than trying to force-fit rigid, generic off-the-shelf software, the goal is to work directly with an experienced operator to fine-tune the scanner's fields, exports, and POS handoffs around how your team actually receives totes on delivery mornings.

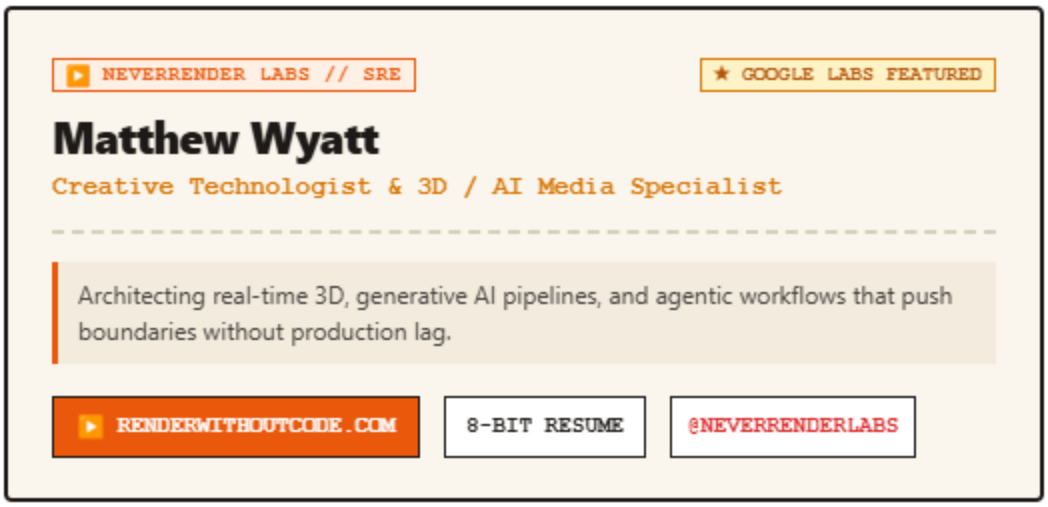

Take a spin through both links when you have a free minute. If you're open to it, I'd love to swing by and run a 5-minute test on a live delivery tote so you and your intake lead can tell me exactly what custom tweaks would make your morning receiving seamless.

Best,

Matthew Wyatt
